

Digi Moni

What is Digital Monitor (Digi Moni) ?

Also know as Promiscuous on other radio

For Ham radio use via a Repeater

1. It replaces the need for a RX group list
2. Lets you RX all Talk Groups used on Slot 1 or Slot 2 or Both Slots 1 and 2
This means no matter what Talk Group is being used you can RX it.

Setting I would recommend -

CPS – Optional Settings – Digital Fun

Digital Monitor	Single Slot	▼
Digital Monitor CC	Any	▼
Digital Monitor ID	Any	▼
Monitor Slot Hold	Off	▼

Digital Monitor options -

Off

Single Slot (Will RX all Talk Groups being used on that Slot 1 or 2)

Double Slot (Will RX all Talk Groups being used on Both Slots 1 and 2)

Digital Monitor CC = Any (Best for scanning)

Digital Monitor ID = Any (Best for scanning)

Monitor Slot Hold = Off (I use OFF so it can swap slots)

For Scanning I would make one change -

Digital Monitor = Double Slot (Will RX all Talk Groups being used on Both Slots 1 and 2)

Digital Monitor	Double Slot	▼
Digital Monitor CC	Any	▼
Digital Monitor ID	Any	▼
Monitor Slot Hold	Off	▼

Via Hotspots

Simplex Hotspot – Only Required if you have set Static Talk Groups.

Duplex Hotspot – If you have Static Talk Groups. If you want to listen on both slots.
